

Congratulations !!!

Customizations Installed Successfully

1. First Log Out and Log In:

Ensure all changes take effect.

2. Making Sure

after the setup your system should look like this <https://i.imgur.com/irHsQDs.png> if not see 3rd and 4th step

3. Troubleshooting Extensions:

If you can't see the top bar with rounded black background, disable and re-enable the 'open-bar' and 'blur-my-shell' extensions by these commands

Bash ▾

```
gnome-extensions disable blur-my-shell@aunetx
gnome-extensions disable openbar@neuromorph
```

Bash ▾

```
gnome-extensions enable blur-my-shell@aunetx
gnome-extensions enable openbar@neuromorph
```

4. Wallpaper Setup (if needed):

If the wallpaper isn't visible, use the following commands:

Bash ▾

```
gsettings set org.gnome.desktop.background picture-uri-dark "file://${HOME}/Pictures/wallpapers/03-g46caw.jpg"
gsettings set org.gnome.desktop.background picture-uri "file://${HOME}/Pictures/wallpapers/03-g46caw.jpg"
```

5. Cleaning Up Not needed files

If you haven't noticed yet during this installation two hidden folders were created in your home directory which are not needed anymore. If you want feel free to delete those

Bash ▾

```
cd ~
sudo rm -rf .g46c@shafin .g46c@resources
```

6. Final Steps:

Enjoy your setup and remember to reboot for all changes to finalize.
